YOUR FULL NAME

TARGET ROLE | CORE SKILL | CORE SKILL | CORE SKILL

City, Country • Phone • Email
LinkedIn • GitHub • Portfolio

PROFESSIONAL SUMMARY

Write 2–3 concise lines connecting your background to the target role. Highlight your strongest relevant skills, the systems or projects you have built, and the value you can bring. Avoid generic claims and unsupported metrics.

EDUCATION

University / College Name — City *YYYY–YYYY*
Degree, Major / Specialization **• GPA: X.XX / X.XX**
Previous School / College — Qualification **• Grade: XX%**

TECHNICAL SKILLS

Programming: Language 1, Language 2, SQL
Core / Domain Skills: Relevant concepts, algorithms, methods
Libraries & Frameworks: Library 1, Framework 1, Framework 2
Data & Databases: Data processing tools, SQL, Database
Tools: Git, GitHub, IDE, cloud or deployment tools used

SELECTED PROJECTS

Project One — Project Title *Technology Stack* **GitHub Repo**
- Built [what you created] to solve [specific problem] using [relevant technologies].
- Implemented [technical approach] and validated results using real evaluation or evidence.

Project Two — Project Title *Technology Stack* **GitHub Repo**
- Designed or developed [important functionality] and explain your individual contribution.
- State measurable results only when you can verify how they were measured.

Project Three — Project Title *Technology Stack* **GitHub Repo**
- Summarize the technical problem, implementation, and skills relevant to the target role.

EXPERIENCE / INTERNSHIPS

- **Role — Organization** | Dates: describe relevant work, ownership, and outcomes. Remove this section if not applicable.

CERTIFICATIONS / PUBLICATIONS

- Relevant certification, publication, award, or conference — issuer/status, year. Add a link when available.
- Keep only credible, relevant items.

ACHIEVEMENTS & LEADERSHIP

- Award, competition result, leadership role, or open-source contribution — organization, year.

BUILD A RESUME FOR HIGH-VALUE ROLES

A practical guide for targeting ■24 LPA opportunities

This guide helps you present stronger evidence of your skills. It is not a promise of a ■24 lakh offer: compensation depends on role, company, market, location, experience, and interview performance.

01 | Choose a clear target

- Create a separate resume version for your target track: Software Engineering, AI/ML Engineering, Data Engineering, or Data Science.
- Prioritize the skills and projects most relevant to the job description.

02 | Make projects demonstrate depth

- Build 2–3 substantial projects with a clear problem, architecture or workflow, your contribution, and technical decisions.
- Where relevant, include testing, error handling, security, database design, deployment, logging, and documentation.
- Give each repository a clear README, setup steps, screenshots or demo, and reproducible instructions.

03 | Write evidence-based bullets

- Use the pattern: action + technical method + purpose + verified result.
- Weak: “Worked on a machine-learning project.”
- Stronger: “Trained and evaluated a Random Forest classifier using a documented preprocessing pipeline; compared it with a baseline using [actual metric].” Replace the placeholder only with a real result.
- Never invent accuracy, revenue, users, rankings, latency, or performance improvements.

04 | Match the job description

- Use relevant job-description keywords only when they accurately reflect your experience.
- Use standard headings, selectable text, readable fonts, and a simple one-column layout.
- Remove unrelated details if the resume becomes crowded.

05 | Prepare for interviews

- Practice problem solving, data structures and algorithms, core CS topics, SQL, and role-specific concepts.
- Be ready to explain project decisions, trade-offs, limitations, and possible improvements.
- Track applications, seek referrals where appropriate, and use interview feedback to improve.

FINAL QUALITY CHECK

- All links open; repositories have useful documentation.
- All dates, claims, metrics, certificates, and publications are accurate.
- The resume is tailored to the specific role.
- The exported PDF has no blank pages, overflow, or broken hyperlinks.
- You can confidently explain every skill listed.
