Create a premium, modern personal portfolio website using my uploaded resume/profile as the primary source of information.

Build a **recruiter-focused, professional and visually impressive portfolio** with a clean SaaS/startup-style UI, excellent typography, smooth animations, responsive design, and strong visual hierarchy.

Include:

- Hero section with name, role, value proposition and CTA
- About Me
- Skills & Technologies
- Professional Experience
- Projects & Case Studies
- Achievements & Certifications
- Portfolio/Work Showcase
- Resume Download
- Contact section with relevant social/profile links

Use my actual resume information and **never invent experience, skills, companies, certifications, achievements or results**.

Use Apify MCP when useful to collect or enrich publicly available professional information, such as relevant profile/project details.

Make the website:

- Premium & modern
- Mobile responsive
- Fast loading
- SEO friendly
- Accessible
- Easy to navigate
- Highly credible for recruiters

Add subtle animations and interactive elements without making the design distracting.

Finally, review the complete website as a **senior UI/UX designer and recruiter**, then improve the layout, spacing, typography, content hierarchy and CTA placement before presenting the final version.
